General information

PWS25820260210

The off center load cell PSLQ, made of aluminum alloy, is ideal for any type of platform, especially for large-scale single-cell platforms. The single point load cell PSLQ maintains precision in any position the object is loaded and this solves the problems that usually occur in weighing systems if the object does not rest exactly on the center of the cell. Optional functions and product customization are available. The PSLQ off center load cell has a 6 meter long shielded cable with 6 wires.
