PWS9620261106

The iFORKS weighing fork is a robust, simple and quick to install weighing instrument, ideal in situations where loads must be weighed directly while being unloaded or transported with the forklift. In these cases, we propose the iFORKS weighing fork with integrated load cell. The weight indicator can be placed either in the cab or directly in the weighing fork. The iFORKS weighing solution supports a maximum overload of 200% of capacity, automatically shuts off for optimal battery life and progressivily totalize all the weighs. Tare can be either automatic or manually set. It is possible to transfer data by bluetooth.
