Technical specifications

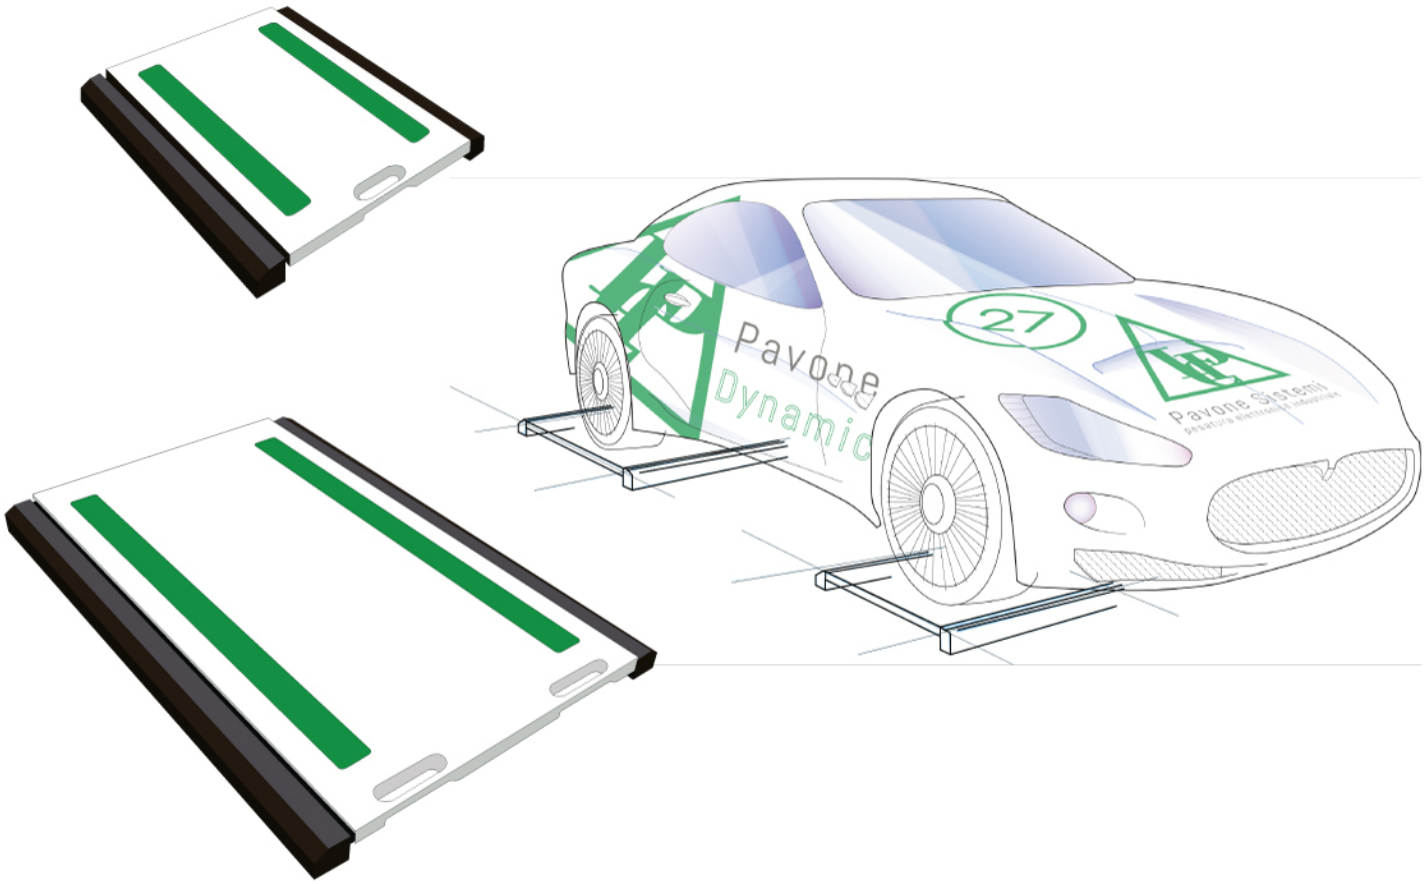

PWS8320261105

The WWS axle weighing platform has been designed for the occasional weighing of small and large vehicles. Neither fixed installation nor a big investment are required since WWS is a mobile platform which has to be placed directly under the wheels of the weighed vehicle. The WWS platform is battery powered and equipped with a wireless communication system. Its strengths are: maximum maneuverability, sturdy structure suitable for extreme conditions and anti-slip material.
