General information

The DAT 1400 Ethernet weight transmitter has a mechanical keyboard and removable screw terminal blocks. DAT 1400 Ethernet is a completely customizable product. Among the various options that can be added there are: the connection (RS485 and power supply) to external smart junction box, the DATALOGGER function and the web-server software, which allows you to check the operating status of the instrument and to regulate other parameters even remotely. Moreover, DAT 1400 Ethernet has a Peak Hold function for dynamic measures. The Software Optimation is given for free. This Software allows you to run certain activities such as calibration or monitoring directly from your computer. The Optimation software is provided by Pavone Systems and guarantees a perfect instrument run.
