The UWT 6008 weight transmitter comes from the Pavone Systems experience. It is a unique product in the weight transmitter family and is ideal for all industrial applications where it is necessary to know the load distribution on the different cells. It is able to monitor all load cells and generate alarms due to excessive cell signal drift, missing connections, failure of one of the cells, unbalanced weight distribution. The emulative control allows the continuity of work of the weighing system even in case of failure on one of the load cells, up to the replacement of the same. The Software Optimation is given for free. This Software allows you to run certain activities such as calibration or monitoring directly from your computer. The Optimation software is provided by Pavone Systems and guarantees a perfect instrument run.
